

Personal Portfolio

We are going to create a personal portfolio website. The purpose of this portfolio is to share your developer projects and let others know a little about you! Essentially, it's a fancy resume. In this project, you will utilize HTML, CSS, and Bootstrap 5 to design the website. Below is a minimum list of what is needed for this portfolio:

Requirements:

1. Navigation

- a. A way to navigate to specific sections of the website (e.g., "About Me," "Projects," "Contact").

2. Buttons to Social Media Links

- a. Buttons linking to your social media profiles, such as:
 - i. LinkedIn
 - ii. GitHub

3. About You Section

- a. **Name:** Your full name.
- b. **Information about who you are:** A brief description of yourself, your background, or your professional journey.
- c. **Skills:** A list or description of the skills you have acquired (e.g., web development, design, problem-solving).
- d. **Frameworks:** A list of the frameworks or libraries you are familiar with (e.g., React, Angular, Vue).
- e. **Coding Languages:** A list of programming languages you know (e.g., JavaScript, Python, HTML/CSS).

4. Coding Projects Display

- a. Showcase your previous or current coding projects, including:
 - i. A brief description of each project
 - ii. Technologies used
 - iii. Links to the live project or GitHub repository (if applicable)

Additional Information:

- **Design Approval:** Make sure to submit your design to one of the instructors before starting the development of the portfolio.
